### **Note on data reporting system by Joint Plant Committee (JPC)**

1. The issue of data collection and reporting by JPC was reviewed in details at various forum of interaction sessions with industry representatives as well as Ministry of Steel and it was felt that given the structural changes in the domestic steel industry as well as the present input-output dynamics, the data reporting system followed by JPC should undergo some modifications.
2. Accordingly, after a detailed examination of the various aspects of the subject matter at hand and recommendation by a high level committee of experts from the industry as well as the Ministry of Steel, JPC has changed its reporting system which is reflected in the present issue of the JPC MIS Report.
3. Following are some of the core issues to be noted under the present reporting system:
  - a) It introduces the method of Crude Steel to HR equivalent, covering only those items which contribute directly to Finished Steel Production starting from Crude Steel/Semis Production.
  - b) It thus separates out Downstream and Value Added Product Basket (CR/GP etc) which would be reported separately.
  - c) Also, data on imports, exports, stock variation and consumption of items featured in this Basket are available with JPC and would be reported accordingly. There would however be no aggregate numbers of these parameters for the items in this Basket.
  - d) Steel Consumption is arrived at by standard procedure of adjusting Finished Steel Production with Net Imports and Stock Variation, computed by using all items across the value chain.
  - e) Per capita steel consumption would be computed by using steel consumption numbers as arrived at above and population for the country as reported by Central Statistical Organisation (CSO), Ministry of Statistics and Programme Implementation.

# Salient Features & Performance Highlights

## Indian Steel Industry Performance in April-March 2019-20: Salient Features

- Provisional data released by JPC indicate that 2019-20 saw India's finished steel consumption edge past the 100 million tonne milestone mark for the first time in its long history of evolution. Such data also shows a subdued growth during the fiscal, given the COVID-19 outbreak with total finished steel production (102.059 mt), up by 0.8% and consumption (100.067 mt) up by 1.4% over 2018-19. India was a net exporter of total finished steel with exports (8.355 mt, up by 31.4%) outpacing imports (6.768 mt, down by 13.6%). It is also observed that domestic requirements were primarily met from domestic supply, given that the share of imports in domestic consumption remained at a low 6.8% during April-March 2019-20 (7.9% in April-March 2018-19).
- Domestic crude steel production stood at 109.215 mt and declined by 1.5% over last year. Overall PSU production reported a decline of 2.8% whereas the Private Sector reported a decline of 1.2%.
- Volume-wise, non-alloy HRC (1.646 mt, down by 15.6%) was the item most imported (34% share in total non-alloy), led by imports from Korea (40% share of total finished steel imports).
- Volume-wise, non-alloy HRC (4.817 mt) was the most exported item while Bars & Rods (0.507 mt, down by 0.4%) led exports in the non-alloy, non-flat category. Vietnam led exports of total finished steel – not only overall (2.337 mt, 28% share) but also recorded the highest share in case of HRC (49%).
- Globally, the outbreak of COVID-19 in the Wuhan industrial belt of China and its spread thereafter to other parts of the world, besides leading to loss of lives, went on to wreak havoc on the global economy as well as steel industry, dampening demand, depressing prices, reducing output, leading to loss of profitability and an overall weakening of the entire economic framework.
- World Steel Association data shows that world crude steel production stood at 293.98 mt in January-February 2020 (prov.), up by 1% year-on-year. Steel demand there continues to be slow with the steel sector PMI for March 2020 (42.2) indicating continuing sectoral contraction. This in a way hints at the possibility of the nation channelizing their surplus material through exports and is also supported by the recent raising of export tax rebates on key items of finished steel by China. Nonetheless, India's import of total finished steel from China declined by 22% in during 2019-20.
- Imports of total finished steel were valued at Rs. 44683 crores (USD 6304 million), while exports were valued at Rs. 36726 crores (USD 5181 million), indicating a wide trade deficit.
- Global steel prices were all south-bound in March 2020, impacted more by the COVID-19 effect that disrupted demand-supply balance severely. Domestic steel prices were impacted by local supply-demand imbalance and influenced by global trends.
- The domestic economic environment remained subdued, with Q3 2019-20 GDP reported to grow by 4.7% (source: CSO) with full year projections placed at 5%. With the outbreak of COVID-19, most research agencies have scaled down India's GDP growth for 2020-21 (IMF forecast, for example, stands revised at 1.9% for FY21 compared to 5.8% earlier). During April-February 2019-20 (prov.), manufacturing growth as captured in the IIP continued to remain subdued (up by 0.9%) while the Index of Eight Infrastructure Industries reported a growth of 1% only.

## INDIAN STEEL MARKET : PERFORMANCE HIGHLIGHTS
